Part1 - Multinomial Logistic Regression

Add a description...

Harshit Aggarwal

In this part, we implement multinomial logistic regression from scratch and then perform hyperparameter tunning. The hyperparameter tunning is done on following parameters.

```
config.learning_rate = [0.001, 0.0001]
config.num_epochs = [200, 500, 1000]
```

The results for the same are given below.

Import panel   Add panel

Run set 1 ⋮ | + 👁

The best set of parameters are:

Accuracy	0.52838
Epochs	1000
Learning Rate	0.0001
